THE BLUE CORNER

Nobody Fights Alone.

thebluecorner.ca — DNS

Six records, about ten minutes. The website and its sign-up form are built and tested; they go live the moment these are saved. Your Google Workspace email is untouched.

Where

Cloudflare → **thebluecorner.ca** → **DNS** → **Records** → **Add record**. Leave TTL on **Auto**.

> **Set both `A` records to "DNS only" — the grey cloud, not the orange one.**
>
> Proxied records stop our server from collecting its security certificate. If the site shows a certificate warning or keeps redirecting, this is why, and clicking the cloud grey fixes it.

The records

#	TYPE	NAME	VALUE	
1	`A`	`@`	`52.60.233.71`	DNS only
2	`A`	`www`	`52.60.233.71`	DNS only
3	`TXT`	`resend._domainkey`	the key below	
4	`TXT`	`send`	`v=spf1 include:amazonses.com ~all`	
5	`MX`	`send`	`feedback-smtp.us-east-1.amazonses.com`	priority `10`
6	`TXT`	`_dmarc`	`v=DMARC1; p=none;`	

Records 1–2 point the domain at the site. Records 3–5 let us send email as the domain so it arrives rather than landing in spam. Record 6 reports anyone forging mail from it.

Type names exactly as written — `send`, not `send.thebluecorner.ca`. Cloudflare adds the domain.

Record 3

Copy this from the `record-3-dkim.txt` file sent with this page, not from here. It is one long line and any PDF or email will wrap it on screen; copying the wrapped version puts an invisible line break in the middle, which looks fine in Cloudflare and silently fails to verify.

```
p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQCbG9x8FUgcgmjFZN8uXn/9ebS6RHPEU8KlZsl6RkbTY4pgHFtjxF8gEdxYFqmSvi2lm0SsKvAy0
42icgpQGr6m6frMgVO6Rkm2fVkZz016iEtH3n04X1w8Yhh+4YrjV1KOIU3jQbOP5uTjCSV/ffoLPVMQdLk7sy7SWfergaEnZwIDAQAB
```

Leave alone

The five `MX` records on `@`, the `v=spf1 include:_spf.google.com` record and the `google-site-verification` record — those are your email. In particular **don't edit the existing SPF or add a second one**; a domain may only have one and two breaks both. Ours sits on `send`, so there is nothing to merge.

When you're done, tell us and we'll confirm both halves. `https://thebluecorner.ca` should show the site with a padlock within a minute or two of saving.
